Staff / Senior Product Designer - Systems UX • Workflow Architecture • Data-Dense UI • Security & Developer Platforms

I design operational interfaces that make complex platforms understandable and controllable, defining workflows and system models that scale across security and DevSecOps environments.

EXPERIENCE

Senior Product / UX Designer

Eclypsium | Remote | Oct 2024 – Feb 2026

Served as a cross-team design authority for an enterprise security platform spanning evaluation engines, sensors, and related capability areas.

- Aligned workflows, navigation, and interaction models across five engineering teams, ensuring cohesive behavior across product areas as the platform scaled.
- Clarified configuration controls, status visibility, and communication between evaluation display and sensor provided data, increasing transparency of system state and available actions.
- Rebuilt a script-based proof of concept into a configurable multi-use workflow capability, replacing opaque evaluation logic with reusable configuration which advanced the platform while resolving technical debt.
- Led backlog prioritization, story definition, and release sequencing for four months in a dual role as interim Product Manager while maintaining system-level design ownership.
- Facilitated cross-functional working sessions with product, engineering, sales, and support to gather requirements, resolve tradeoffs, and land platform decisions under delivery constraints.
- Used rapid interactive prototyping throughout discovery and implementation, working 1:1 with frontend engineers and designers to ensure clean translation into production.

Senior Product / UX Designer

Sophos | Remote | Sep 2021 – Apr 2024

Designed automation and investigation workflows within a multi-product cybersecurity suite supporting IT administrators and analysts in high-complexity operational environments.

- Established a model for platform-wide credential management, reducing redundancy and improving sensitive data security.
- Extended and refined a DevSecOps-oriented automation pipeline builder, improving usability, configurability, and transparency across product areas.
- Integrated AI-assisted case summarization and event interpretation directly into investigation workflows, reducing analyst effort while preserving human oversight and editability.
- Contributed to cross-suite interaction standards and design system components adopted across multiple teams.

UI and UX Lead

Zibasec | Remote | Jan 2020 – Aug 2021

Led as sole designer for a new phishing simulation platform used by government agencies, establishing foundational workflows, interaction patterns, and a design system from concept through production. Zibasec was acquired by Sophos.

- Partnered with engineers and leadership to define scope, iterate rapidly, and shape product direction during early-stage growth.
- Structured campaign creation, reporting, and scheduling into modular systems supporting scalable deployment and enhancing user control.
- Designed a dynamic status-aware orchestration model as the structural pattern for workflow progression and summarization.
- Established a reusable design library adopted by engineering, strengthening long-term maintainability and cross-feature consistency.

User Interface Developer

Georgia Institute of Technology | Atlanta, GA | Mar 2012 – Jan 2020

Modernized internal government contract and proposal systems by replacing fragmented legacy tools with standardized web applications and reusable interface frameworks.

- Structured document routing and approval workflows for research contracts and security arrangements, improving operational traceability.
- Introduced new processes including a shared UI framework and reusable front-end templates adopted across multiple internal systems and teams.
- Built and documented a reusable design library supporting long-term maintainability and cross-team consistency.
- Conducted user testing and iterative validation to refine workflows and reduce friction across research administration processes.

SKILLS

- Figma, interactive AI prototyping, design systems
- Frontend experience (HTML, CSS, Tailwind, JavaScript)

EDUCATION AND CERTIFICATIONS

Bachelor of Information Technology in Software Development

Clayton State University

UX Certification

Nielsen Norman Group
