Product Designer - Systems UX • Workflow Architecture • Data-Dense UI • Security & Developer Platforms

I design operational interfaces that make complex platforms understandable and controllable, defining workflows and system models that scale across security and DevSecOps environments.

EXPERIENCE

Senior Product / UX Designer

Eclypsium | Remote | Oct 2024 – Feb 2026

Served as a platform-wide design authority across five engineering teams for an enterprise security platform spanning firmware evaluation, network and endpoint sensors, and asset management.

- Unified fragmented legacy flows into new extensible models that enabled platform capabilities. Clarified configuration controls and system status across evaluation and sensor data, increasing transparency into platform behavior.
- Led backlog prioritization, story definition, and release sequencing in a dual role as Product Manager while maintaining system-level design ownership.
- Facilitated cross-functional working sessions with product, engineering, sales, and support to gather requirements and resolve tradeoffs.
- Used rapid interactive prototyping throughout discovery and implementation, overseeing frontend engineers and designers on implementation decisions for clean translation into production.

Senior Product / UX Designer

Sophos | Remote | Sep 2021 – Apr 2024

Designed automation and investigation workflows within a multi-product cybersecurity suite, supporting IT administrators and analysts.

- Defined and rolled out a credential management model across the suite, reducing redundancy and improving sensitive data security.
- Extended and refined a DevSecOps-oriented automation pipeline builder, improving usability, configurability, and transparency across product areas.
- Integrated AI-assisted case summarization and event interpretation into investigation workflows, preserving human-in-the-loop oversight and editability while reducing analyst effort.
- Built cross-suite interaction standards and design system components, partnering directly with engineering on adoption across multiple teams.
- Wrote and committed production-level HTML, CSS, and Tailwind within React templates, working as a design engineer alongside the front-end team.

UI and UX Lead

Zibasec | Remote | Jan 2020 – Aug 2021

Led as sole designer for a new phishing simulation platform used by government agencies, building the foundational product experience from concept through production. Zibasec was acquired by Sophos.

- Partnered with engineers and leadership to define scope and iterate rapidly, supporting the company's early-stage growth.
- Designed a modular campaign system that could be built, reused, and modified in any order, paired with a dynamic status model that kept progress and gaps clear before sending.
- Built the design system and wrote component template code, giving engineering a reusable foundation for long-term consistency.

User Interface Developer

Georgia Institute of Technology | Atlanta, GA | Mar 2012 – Jan 2020

Modernized internal government contract and proposal systems by replacing fragmented legacy tools and practices with standardized web applications.

- Brought the engineering team's front-end process current by introducing component-based design patterns, building and documenting a reusable design library adopted across the org.
- Built dynamic, condition-based workflows that routed research grants and contracts, supporting compliance for defense and security research programs.
- Ran ongoing user research across researchers, faculty, staff, and administrators, combining interviews, on-site testing, and analytics to catch gaps between leadership's stated requirements and what users actually needed.
- Oversaw junior designers and student workers across varying project scope, providing guidance, performance feedback, and approving work assignments.

SKILLS

- Figma, interactive AI prototyping, design systems
- Frontend development (HTML, CSS, Tailwind, JavaScript)
- Full-stack deployment (cloud, database, domain) via AI-assisted development

EDUCATION AND CERTIFICATIONS

Bachelor of Information Technology in Software Development

Clayton State University

UX Certification

Nielsen Norman Group
